

Innovation

Parex USA has always been at the forefront of innovation and product development. The same is true for when it comes to color. The pigments in Parex USA finishes are 100 percent exterior grade for maximum colorfastness and UV resistance. And, in our textured surfaces, we use only bright white marble aggregate as texturing stone on all finishes. It's an exceptional step that improves color stability and consistency while providing sharper and cleaner colors than finishes with other aggregates. No other aggregate yields such consistent color.

Color

The colors shown here demonstrate a range of 75 unique standard colors. But, we know there is nothing standard about color. So, we do what is necessary to match any color you specify. Our Color and Sample Lab has the knowledge and expertise to match any custom color you can imagine. It is time to let your colors fly with Parex USA's virtually limitless color and texture options.

In addition to our wide selection of color options, Parex USA standard colors and custom colors are available with our new ColorFast pigment system. The new high-end color system increases the range of color options we are able to achieve. ColorFast pigments are VOC and APEO-free. They also come with a fade resistant warranty when used with a Parex USA finish or coating.

DPR Acrylic Finishes

DPR Acrylic Finishes are 100% acrylic-based textured finishes made with Dirt Pick-Up Resistance (DPR) technology meaning the surface of the finish hardens and does not soften again under heat. The non-tacky surface provides high resistance to accumulation of dirt, mold, and pollutants.

Elastomeric Finishes

Elastomeric Finishes are formulated with DPR technology, but they also provide superior elongation. They are highly flexible and can bridge existing hairline cracks.

Coatings

Parex USA offers a premier line of coatings that create a protective and decorative layer over any Parex USA finish. Available as a DPR Acrylic Coating and Elastomeric Coating, they are able to resist fading and the build-up of dirt, soil and mold.

Textures

For additional design flexibility, Parex USA offers a wide range of textures. From smooth to heavily textured, with aggregate sizes from fine to coarse. Parex USA's broad range of textures also includes a variety of specialty finishes designed to create high-end decorative surfaces. The design potential is endless.

Envision

Any Shape. Any Color. Any Texture.

With innovative products and application techniques from Parex USA, whatever you envision for your project, we have the solution. From modern to classical architectural shapes, from bright bold colors to neutral beiges, from smooth surfaces to rugged antique textures, the possibilities are endless. Let Parex USA's EIFS and Stucco Solutions bring your vision to life. Any Shape. Any Color. Any Texture. Our design professionals are available to help you achieve the look you have envisioned. PAREXUSA COLOR COLLECTION

When it comes to color Parex USA has the entire spectrum covered. This chart represents a few examples of what Parex USA can create, but the possibilities are limitless. Parex USA's Color and Sample Department is available to bring your vision to life. We can help match colors from just about any type of sample. For more information, contact us at 866-516-0061 x 1985 or color.samples@parexusa.com.

These colors are intended to show the approximate color. Color will vary depending on type of finish and texture selected. Application by machine spray or texturing will increase the depth of color. Variation in color due to weather, job conditions and method of application should be expected. For color verification, request an actual sample in the color and texture prior to ordering material. Apply a small sample to be used on actual substrate before proceeding with the application. Parex USA is not responsible for color correctness of applied finish. Color must be verified and approved by owner prior to application.

Numbers in () indicate the reflective value. The higher the number, the less UV light the color absorbs and the greater the reflectance. LRV numbers below 25 are not recommended for use over EIFS in large areas.

Each color number is designated either an L or a D to represent Light or Dark base, respectively.
