- *You may special order any stone to your specific quantity.*

### Stone Cuts

**Mosaic**

**Square & Rec.**

**Ledge**

**Ashlar**

*Thin Stone Veneer is the sawn facings of traditional "full bed" building stone veneer. Whereas traditional building stone veneer typically ranges in thickness (depth) from 3" to 5" and requires a bearing shelf, thin veneer products vary in thickness between 3/4" and 1 1/4" and do not require any special foundations. 90° angle cuts taken from the interior of full bed cutting stock produce thin veneer corners that help conceal the overall material depth.*

*Thin veneer stone installs quickly and easily over a wide variety of substrates allowing for greater versatility in installation.*
