- *It is available in full bed and thin stone veneer.*
- *Thin Stone is priced by the pallet. Pallets coverage is approx. 200 SF depending on you joint size.*
- *Corners are priced and sold by the linier foot. .*

Stone Cuts

***Thin Stone Veneer** is the sawn facings of traditional "full bed" building stone veneer. Whereas traditional building stone veneer typically ranges in thickness (depth) from 3" to 5" and requires a bearing shelf, thin veneer products vary in thickness between 3/4" and 1 1/4" and do not require any special foundations. 90° angle cuts taken from the interior of full bed cutting stock produce thin veneer corners that help conceal the overall material depth.*

Thin veneer stone installs quickly and easily over a wide variety of substrates allowing for greater versatility in installation.
